MeHA COMPANY

OUR SERVICES

MeHA Company specialize in website programming, application programming, SEO (search engine optimization), graphic design, and security services for websites and servers.

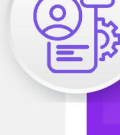

WEBSITE DESIGN

The MeHA team creates visually appealing and functional websites tailored to your business needs, ensuring a user-friendly interface and seamless navigation. We design and develop websites that are responsive, accessible, secure, SEO oriented and in line with current trends. We are also known for our unique flair for 3D designs.

The MeHA team develops flexible, reusable, secure, hybrid, and low_code custom mobile apps for iOS and Android platforms.

Our team of skilled young programmers provide innovative solutions to attract the audience and increase the user experience.

APP DEVELOPMENT

GRAPHIC DESIGN

The MeHA team of graphic designers crafts compelling visuals, including logos, branding materials, and multimedia content, to reinforce your brand identity and captivate your audience. Our distinguishing feature is providing typography, maximalism, minimalism, 3D design, etc..

The MeHA team implements robust security measures to protect your website from cyber threats, ensuring data integrity, confidentiality, and user trust. Installation of strong firewalls, regular updates, installation of SSL, periodic backups, etc. are only part of our security measures.

WEBSITE SECURITY

SEO SEARCH ENGINE OPTIMIZATION

The MeHA team employ off_page, on_page and technical SEO strategies to improve your website's visibility on search engines, driving organic traffic and enhancing your online reach. Our professional team uses different methods such as link building, website security, page speed, preparing unique content, etc. to increase the rank of your website.

MeHA COMPANY

SERVICE DELIVERY PROCESS

Our company assures you that by entrusting your project to our professional team, you will have a different and rewarding experience. The implementation steps of each project are as follows:

REVIEW AND PLANNING

1

- Holding a meeting with employers to perceive the goals and needs of the project.
- Gathering project requirements, getting feedback from the target audience and analysing documents.
- Estimating and announcing the cost and determining the project execution time.

PREPARING THE PROJECT

- Creating and implementing project architecture based on needs.
- Determining tasks to clarify the progress of the project.
- Setting up a project management system using agile development and creating a Kanban table.

2

UI AND UX DESIGN

3

- User interface design based on approved designs.
- Final review of plans by the employer and making necessary changes based on feedback.
- Improving and completing the user experience with the cooperation of the employer.

SOFTWARE DEVELOPMENT AND IMPLEMENTATION

- Backend and Frontend development through the technologies required in each project.
- Testing and approval of the project by the employer and its final delivery.

4

MAINTENANCE AND SUPPORT

5

- Fixing reported bugs and solving problems.
- Providing regular system and security updates.
- Continuous technical support (if needed by the employer).
